

Tower climbers completed an upgrade on the Viaero Wireless tower in Imperial Monday. The upgrade enables the carrier to offer 4G data speeds to their customers. 4G is the fourth generation of cell phone mobile communication technology. Smartphone users will experience faster web surfing and faster performance from applications that access data service, such as cloud-based services. The faster speed will also accommodate mobile video chat applications. In addition to the Imperial tower, Viaero towers in Champion, Wauneta, Palisade and Culbertson will be upgraded over the next week. (Republican photo)
